Riyadh Real Estate Data Analysis Using SQL Server

Introduction

Real estate data for a number of neighborhoods in Riyadh were analyzed to understand the factors affecting real estate pricing and identify differences between regions and neighborhoods.

Analytical Questions

- How many neighborhoods are included, and which has the highest number of properties?
- Which regions have the highest and lowest property prices?
- What is the average price in each neighborhood, and which are the most and least expensive?
- What is the average price per square meter across neighborhoods?
- Do furnishing, elevator, number of rooms/bathrooms/floors, and price per square meter impact the selling price?
- Does property age influence its price?
- What are the top 5 most and least expensive properties, and where are they located?

Key Findings

• The neighborhood with the highest number of listed properties is Al-Mansoura (217 properties) in the South, while the lowest is Al-Rawdah (71 properties) in the East.

• The region with the highest average property price is North, and the lowest is South.

• The most expensive neighborhood is Al-Nakheel Al-Sharqi (highest average), and the least expensive is Al-Mansoura (lowest average).

• The top 5 most expensive properties were all in the North, with areas above 277 sqm, and prices over 3.3 million SAR. The 5 cheapest were all in the South, with areas between 90–93 sqm and prices under 77K SAR.

• The highest average price per square meter was in Al-Nakheel Al-Sharqi(9729.94), and the lowest was in Al-Marwah(1135.22).

• Furnishing has a slight effect—not a big difference, but it’s there. Having an elevator and more bedrooms definitely increases the price, and the bathrooms don’t show much impact it’s clear that most properties had more than one floor, and prices were pretty similar regardless.

• There’s a clear negative correlation between property age and price. The older it gets, the cheaper it is.

• Higher price per square meter usually means a higher total property price, but of course, it’s not the only factor other features matter too.

And if we want to know the **most expensive property in each region** and which neighborhood it’s in, the answer is shown in the table.

	Region	Neighborhood	MaxPrice
1	North	Al-Aqiq	3384004
2	East	Al-Ruwad	1404933.125
3	West	Al-Oraija	1124839.625
4	Central	Al-Jaradiyah	566360.3125
5	South	Al-Khalidiyah	420212.90625

• Same thing if we want to know the **cheapest property in each region** and where it was located.

	Region	Neighborhood	MinPrice
1	South	Al-Khalidiyah	72401.859375
2	Central	Al-Maather	92971.703125
3	West	Al-Suwaidi Al-Gharbi (Western Suwaidi)	183299.546875
4	East	Ishbiliyah	267405.90625
5	North	Al-Malqa	636244.1875
